

# RENTERS BEWARE MOLD FOUND IN OC APARTMENTS

## WHAT YOU SHOULD KNOW AND DO TODAY

Toxic mold has been discovered in various Orange County (California) apartments that complexes have been hiding from tenants. Toxic mold, which is not always visible, can cause serious health issues for children and the elderly. Testing is even more critical for those with underlying health issues, allergies, a weakened immune system, asthma, eczema (skin rash/itch), or other medical conditions because of exposure to toxic mold.

Now, you can do your own test in seconds using an ultra-simple low-cost meter shown below. This device, which can find moisture (mold) under vinyl, wood, plank, and other flooring, is available from Home Depot stores and from Amazon.

**If you find moisture, you likely have mold where you live now. If so, contact your local code-enforcement office, file a complaint, and then follow up with them to verify action is being taken.**

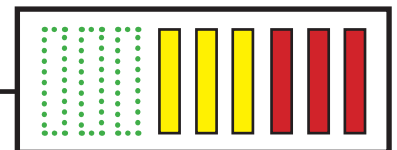

### HOW TO TEST:

Turn device upside down, push yellow center button to turn it on, and move it along floor as shown (press down firmly against floor surface).

Model MM9  
from General  
or MM8

The LEDs light up and sound tells when you have found moisture.

**See yellow/red bars?  
Mold is likely hiding  
where you live now!**

**TEST ENTIRE FLOOR** ← →

## IF YOU DETECT MOISTURE, YOU LIKELY HAVE MOLD!

If you have serious health issues resulting in lost income, medical bills, or the inability to function normally because of possible mold exposure, please email us below today to see if you may qualify for recovery.
